MICROFUSION

SINGLE PHASE SCR POWER CONTROLLERS

MADE IN THE USA

FEATURES

Auto-Ranging Input Voltage
24 - 600 VAC, 45 - 65 Hz

AC Output
16, 32, 50, 80 Amps (@ 50°C 6000 ft)

Control Features
Microprocessor-based controller / phase lock loop timing
Firing modes: zero-cross / phase angle / Zero Cross Transformer (ZCT) Mode
Feedback: voltage, current, true power, external
Adjustable soft start
Output limits: voltage, current, power
Missing cycle detection
SYNC-GUARD™ and TRANS-GUARD™
Dedicated RUN/STOP bit

Analog Interface (Up to Two Analog Inputs)
Standard setpoint ranges: 0 - 5 Vdc, 4 - 20 mA
Field scalable 0 - 10 Vdc , 0 - 20 mA , or potentiometer

Available Fieldbus Interfaces

DeviceNet™	EtherNet/IP
EtherCat	Modbus RTU (RS-485)
PROFINET	Modbus TCP (Ethernet)

Easy Setup via Plug-n-Play USB
Load / save configurations
Diagnostics with chart and log operations

OEM Options (Consult Factory)
UL-listed. External panel mount or liquid- cooled heatsinks in single- and multizone configurations.
Line/load connections ring terminal option.

Two Year Warranty

DESCRIPTION

MicroFUSION is an ultra-compact high-performance microprocessor-based power controller, available in single phase, three phase 4 SCR, or three phase 6 SCR models to control AC loads.

Resistive or transformer-connected loads can be controlled in either Phase Angle, Zero Cross, or Zero Cross Transformer (ZCT) Mode. Output is controlled linearly with respect to command signal and can be set to the average or RMS value of the voltage and current, as well as true instantaneous power or external feedback.

MicroFUSION Series power controllers are available in current ratings from 16, 32, 50, 80 amps AC. Auto-ranging voltage circuitry enables main supply voltage from 24-600 VAC, (45-65 Hz) eliminating the need for hardware jumpers or stocking multiple controllers for international voltages. A separate 24 Vdc power source supplies the control electronics and maintains critical communications to your control system when the mains are absent.

Status LEDs and an LED bar graph make operation and troubleshooting simple. A plug-n-play USB interface and free FUSION Control Panel software for the PC further simplifies installing and configuring the controller to your application. For example, controller settings can be duplicated simply by loading a configuration file saved from a previous unit.

Setpoints can be controlled through the standard analog or optional digital fieldbus interface. The factory-configured analog setpoint signal ranges are 0 - 5 Vdc and 4 - 20 mA, both of which are field scalable from 0 - 10 Vdc or 0 - 20 mA.

The fieldbus interface options include DeviceNet™, EtherNet/IP, EtherCAT, PROFINET, Modbus RTU (RS-485), or Modbus TCP. These can be used to communicate with a PLC or factory control system.

PROFINET, Modbus TCP, and EtherNet/IP are available as internal fieldbus options. All interfaces are available through an external module. Furthermore, a single external network module can control up to ten zones, reducing system installation costs.

The robust design of MicroFUSION allows for continuous full-frame current operation - without derating - at up to 50° C / 6000 ft altitude. Cooling is accomplished through either natural convection, forced air, optional external panel mount, or optional liquid-cooled chill plate.

The optional remote display provides clear readouts of key electrical parameters and alarm status. Set-points, limits and alarms are touchpad accessible and easily customized. For additional convenience, a panel mounting kit is also provided, eliminating the need for costly external meters / indicators / switches and the associated costs of wiring and labor.

Recommended fuse sizing: 1.25 x SCR frame rating (Amps).
For Phase Angle, select closest standard fuse size.
For Zero Cross, select next largest size.

ACCESSORIES

CCI LINK™

MicroFUSION features CCI Link™ (Figure 1), a proprietary deterministic digital bus that enables multiple Control Concepts devices to communicate with each other. CCI Link™ is currently used to enable SYNCGUARD™ over a digital bus. The ability to daisy-chain multiple MicroFUSION units will be released soon.
